

Take Control of Your Campus Building Performance

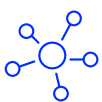

The campus experience starts with building performance

Education institutions are under pressure to reduce energy costs, meet sustainability objectives, and maintain comfortable learning environments across a growing portfolio of campus facilities. Yet many facilities teams face limited visibility across buildings and systems, making it difficult to identify equipment issues before they impact operations.

Carrier ABOUND helps universities and colleges move to proactive maintenance by connecting building data, identifying emerging equipment issues, and prioritizing actions that support campus performance. With the AI-powered ABOUND™ Predictive Insights software and expert remote support from Carrier Customer Command Centers, facilities teams can make more informed decisions across their campus portfolio.

Manage campus facilities with greater confidence

Connect your buildings

Gain centralized visibility across connected equipment, buildings, and campus facilities through a unified view of operational performance.

Prioritize effectively

Actionable recommendations help teams focus on the highest-impact maintenance tasks.

Detect issues early

AI-powered insights help highlight anomalies and emerging equipment issues before they escalate.

Access expert support

Carrier Customer Command Center experts provide guidance, enable remote resolution, and coordinate field service when needed.

Choose the level of support that fits your team

Carrier ABOUND provides flexible support options that help higher education institutions improve operations based on their goals, resources, and facility management needs.

About Predictive Insights

AI-driven analysis helps identify equipment performance issues and provide prioritized recommendations to support proactive facility decisions.

About Advisory Services

Carrier experts help validate priorities and guide optimization decisions, including when to repair or replace equipment.

About Managed Services

A remote service management team creates and tracks work orders, coordinates support, and verifies outcomes.

Enable stronger performance across campus buildings

Carrier Abound's solutions help building operators to:

Reduce energy consumption and operating costs

Identify inefficient equipment behaviour and uncover opportunities to improve building performance.

Improve visibility across campus facilities

Monitor connected systems across multiple buildings through a centralized operational view.

Improve facilities productivity

Help teams prioritize the most impactful actions and make better use of limited resources.

Extend equipment life

Detect potential issues earlier to help reduce unexpected failures and support long-term asset reliability.

Support sustainability goals

Leverage operational insights that help advance campus sustainability and energy management initiatives.

AI-enabled insights with expert follow-through

Managing multiple campus facilities requires timely information and clear priorities. Carrier Abound helps transform building data to insights to actions.

INSIGHT

The AI platform detects unusual equipment behavior or performance drift that may affect efficiency or occupant comfort.

RESPONSE

Carrier experts help validate the issue and assess whether action is needed.

RESOLUTION

Teams can act remotely when possible or coordinate field service when on-site work is required.

VERIFICATION

Completed work can be reviewed to confirm the issue was addressed and the intended result was achieved.
