

Take Control of Your Healthcare Building Performance

Care environments depend on building performance

Healthcare facilities need to operate reliably to support patient care. Yet facilities teams often have limited visibility across complex building systems, making it difficult to identify equipment issues before they affect comfort, cost, internal temperature compliance, or continuity.

Carrier ABOUND helps healthcare organizations move beyond reactive maintenance with the AI-powered ABOUND™ Predictive Insights and expert support from Carrier Customer Command Centers.

What healthcare facilities can do to stay ahead

Connect seamlessly

Centralized visibility across connected equipment, sites, and portfolios using compatible existing infrastructure.

Prioritize effectively

Actionable recommendations help teams focus on the highest-impact maintenance tasks.

Detect issues early

AI-powered insights help highlight anomalies and emerging equipment issues before they escalate. This can help avoid surprise replacement costs.

Access expert support

Carrier Customer Command Center experts provide guidance, enable remote resolution, and coordinate field service when needed.

Choose the level of support that fits your team

Carrier ABOUND meets healthcare organizations where they are. Teams can use the platform directly, get expertise and advice, or extend their facilities capabilities with managed support.

ABOUND Predictive Insights

AI-driven analysis helps identify equipment performance issues and provide prioritized recommendations to support proactive facility decisions.

ABOUND Advisory Services

Carrier experts help validate priorities and guide optimization decisions, including when to repair or replace equipment.

ABOUND Managed Services

A remote service management team creates and tracks work orders, coordinates support, and verifies outcomes.

Enable stronger performance across care sites

Carrier Abound's solutions help building operators to:

Protect care continuity

Help reduce the risk of equipment disruptions that can affect patient care areas or critical facility functions.

Strengthen temperature compliance

Use connected system data to help maintain internal temperature policies across care environments.

Make maintenance more proactive

Act on prioritized recommendations that help focus attention on problems before they escalate.

Reduce avoidable energy cost

Use AI-driven insights that uncover inefficient equipment behavior and guide actions that help improve building performance.

Plan infrastructure investments

Differentiate repair-versus-replace decisions using performance data and expert guidance to plan future upgrades.

AI-enabled insights with expert follow-through

When conditions shift across a healthcare facility, teams need clear direction quickly. The model below shows how Abound Predictive Insights and Carrier Customer Command Centers help connect an insight to a practical, efficient response.

INSIGHT

The AI platform detects unusual equipment behavior or performance drift that may affect efficiency or occupant comfort.

RESPONSE

Carrier experts help validate the issue and assess whether action is needed.

RESOLUTION

Teams can act remotely when possible or coordinate field service when on-site work is required.

VERIFICATION

Completed work can be reviewed to confirm the issue was addressed and the intended result was achieved.

A success story

A healthcare provider used Abound Managed Services across 100 clinics in six states. After five months, the organization saw gains in energy performance, temperature compliance, and service efficiency.*

6.7%

Average monthly energy savings in the last 4 months of the study, exceeding a 3.5% monthly target**

96%+

Internal temperature policy compliance

35%

Reduction in temperature-related complaints year over year

78%

HVAC and lighting issues resolved remotely

45

Truck rolls avoided
